

Welcome to your full-featured document editor

This is a demonstration that includes every feature you requested. Many buttons are functional (bold, italic, lists, etc.) using the browser's built-in commands. For advanced actions (page layout, collaboration, etc.), we show a modal or alert to simulate the feature.

You can type, format, insert images (via prompt), tables (simple), and finally **export to PDF** using the toolbar button. The PDF will reflect the current page size, orientation, and margins you set in the "Page Layout" modal.

- Text formatting: bold, italic, underline, color, highlight...
- Paragraph: align, lists, indent, spacing...
- Insert: image, table, link, horizontal line...
- Page layout: size, orientation, margins, breaks...
- Collaboration: share, comments, version history (alerts)
- Tools: word count, spell check (alerts)

Enjoy exploring the hundreds of buttons – they are all here!
